**Full website restore/migrate to a new location**

Download the **BackupBuddy FULL** backup (zipped folder) of the site to be moved
Download the file **backupbuddy.php**

On the OLD website location:

Upload both to the NEW location root folder

In a browser open http://xxxxxx.xxx/**foldername/backupbuddy.php**

Enter the BackupBuddy **password** set for the site (when first activated)

Authentication Required

Enter your ImportBuddy password below to begin.

[   ] [Authenticate]

Select the correct backup to restore

grate   Server Information   Database Text Replace   Knowledge Base   Support Forum

Step 1: Select Backup to Restore   Display Status Log

[Upload a Backup]   [Restore from Slash]

/home4/annagrap/public_html
Backups in ‹   ›

◉ backup-wp-   .zip   14.26 MB

Full Backup from Mar 13, 2015 5:54:22 am on WordPress v4.1.1
Site: http://
Profile: Complete Backup

[View Meta]   [View Checksum]

What would you like to restore from the backup? ☑ Files ☑ Database

[Restore Backup]   [Advanced Options]

Will require the new **database** name, **MySql** name, **username** and **password**

Step 3: Database Settings

Display Status Log

Manually enter your database settings below or select one of the options below to assist you. The *cPanel Database Wizard* allows you to enter your cPanel credentials to create a database & auto-fill its settings below. The *cPanel Tutorial* button shows you the simplest way to manually create a database. See your host's documentation for non-cPanel hosting. If you are restoring a site back to its original location (for instance after being hacked) you may retain the same database settings by clicking the appropriate "copy" links between settings below.

| cPanel Database Wizard | cPanel Database Tutorial |

	Old Database	→	New Database
Database Server (MySQL) ⑦	localhost	→	localhost
Database Name ⑦	botanic5_	→	botanicalartists
Database User ⑦	botanic5_	→	root
Database Password ⑦		→	
Database Prefix ⑦	bar_	→	bar_

Delete existing database tables?   ☐ Matching Prefix ⑦   ☐ Delete All

| Next Step | Advanced Options |

Check site URL

Once done, check the site is fully functional before allowing BackupBuddy to clean up the files

Step 6: Verify Site & Finish

Verify imported site functionality before proceeding to cleanup:

http://

Common Issues & Tips:

Clicking on a post results in a 404 Not Found

Logging in redirects back to the old site

Source site has changed to the destination URL

Select files to delete for cleanup:

☑ Delete backup zip archive   ☑ Delete ImportBuddy tool files

☑ Delete temporary import files ☑ Delete importbuddy.txt log file

Finish Cleanup

Step 6: Cleanup & Completion

Restore Finished.

Your site should be ready to go at:

http://
